Abstract—Welcome to the recruiting specifications of the summer project team I had in mind! Here, my objective is to recruit a highly proficient team that fosters collaboration, growth, and **individuality**!

Keywords—Summer Project, Fun, Independent Project, Experience

1. Introduction

I am creating a team filled with the most ambitious and highly skilled individuals to tackle a cutting-edge project which will take place over the summer. My goal is to foster a strong learning/working environment that integrates different Technological fields together in such a way that team members will leave with a heightened knowledge of other fields, collaborative skills, and motivated to continue working together. This project will be large enough to show an audience that it is impressive, yet small enough to be able to be completed in a single summer, physically/remotely (made with consideration of COOP/Interns being unable to work on-site).

2. Who am I?

2.1. Explicit Achievements

For my achievements, I placed third as a solo in the CS6 Hackathon due to high self-motivation, self-confidence, and determination to place among the top. The purpose of my saying this is to show that I am not all talk. Without any experience with frontend/backend integration, without any peers, and without knowing whether I was wasting my time or really any idea of what to expect during the competition, I managed to pull through and place among the top...**alone**.

2.2. Implicit Beliefs

Still, I believe my motivation comes from my peers. That is not to say I am undisciplined and not self-motivated. When I work in a team, without time constraints, I can guarantee that I will put my utmost effort to ensure that the finished project is completed. It is my goal—to help the team as a whole—to the best of my ability. This may include using my own time to make sure everything is on the right track. Taking into account the realistic measures, I will not leave a project unfinished.

2.3. Personality

I am an over-thinker and fairly judgmental. I often make some of the most far-fetched remarks when it comes to how I view the world but I also strive to reason, understand, and absorb new information. I am also very direct and rarely give subtle remarks/hints but I am also caring and very inclusive.

2.4. Skills

I am specialized in Neural Networks and Machine Learning. Having taken multiple AI courses on Supervised/Unsupervised/ Learning, Deep Learning (Convolution and Neural Networks), NLP, Model Architecture, Finance, etc., I am very niche when it comes to Computer Science.

3. Detailed Recruiting Methodology

3.1. Specialization - Current Experience

Yes, I will be looking into your past individual projects. However it is for a different reason than you might think. Extracurriculars not only shows me what you have done, but it also shows me that you are **self-motivated and ambitious**. Sending me your resume and any important links would help tremendously.

3.2. Generalization - Receptivity and Enthusiasm

I will also consider how you deal with **new information** and whether you've had any past experience with such. I care deeply about a person's disposition which is often very difficult to identify (more or less generalize). Essentially, I want to be able to spot receptivity as well as ignorance.

3.3. Personal Values

I am also interested in your hobbies and any traits you may find interesting. Knowing my teammates' interests outside of academics is highly valuable as it shows me how you **prioritize** your time.

4. Current Members

Niche Setup: 3 OS Specialization (filled), 3 AI Specialization, 3 Mechanical Engineers

Generally, Mechanical and Electrical engineers will be among the niche, and optimization, DSA, ML will be among the computer scientists.

Table 1. Members

Name	Reason
Aaron Rhim	Data Science + Practical application of AI Project Leader, Designer, and Manager
Felix Perron	Electrical Eng + Experienced at Everything Aerial Robotics Software Leader
Marc Bondoger	Software Eng + OS and Source Control High proficiency in Optimization
Nathaniel Hawron	Electrical Eng + OS and Control Systems Created Minecraft 8 times using Vulkan
Zachrey Zhu	Mechanical Eng + Experienced at Everything High sense of learning and implementation
Leo Kaiya	Computer Science + AI Coursework Hackathon Award Winner
Cohen Van Kalsbeek	Electrical Eng + High proficiency in EV OK Motorsport High Voltage Leader
Axel Bendl	Electrical Eng + Greenhorn Candidate High sense of learning and implementation

5. How to Contact me

I prefer a simple, brief email regarding your interest in joining the team, your schedule (so we can discuss when to meet in-person), possibly including an attachment of your resume and any possible links that may be helpful in the decision making.

Sending me a message on Instagram or Discord is completely fine too. Unless I reach out to you, expect a follow-up response to send your Resume through email.

6. Project Proposal
